

ONCOTWIN — SAMPLE MEDICAL REPORT

FICTIONAL DATA FOR SOFTWARE TESTING ONLY — NOT A REAL MEDICAL RECORD

Patient Information

Patient ID	OT-TEST-001
Patient Name	Test Patient
Age	45 years
Gender	Female
Report Date	08 August 2026

Clinical History

The fictional patient presents with persistent cough, shortness of breath, and unexplained fatigue. Symptoms have been reported for approximately three months.

Investigation

A fictional chest imaging examination demonstrates a suspected pulmonary lesion measuring approximately 3.2 cm in the right lung. Further clinical evaluation and pathological confirmation are required.

Pathology / Diagnosis

Fictional test diagnosis: Stage II Lung Cancer. This statement is included only to test the OncoTwin report-analysis workflow.

Additional Findings

Finding	Result
Tumor location	Right lung
Tumor size	3.2 cm
Clinical stage	Stage II
Smoking history	Positive
Persistent cough	Present
Shortness of breath	Present

Recommendation

Fictional recommendation: Oncology consultation and appropriate confirmatory testing. Treatment decisions must be made by a qualified healthcare professional.

TEST DOCUMENT — Entirely fictional patient information created for OncoTwin software/API testing.
